

## What is Families & Friends of Children with Genetic Disorders?

This non-profit foundation was started by friends & family of Brendan Cogavin, a 5 year old boy who was

diagnosed with a rare genetic disorder. In fact it is so rare that he is one of the only cases in the world. Brendan currently sees approximately 15 different specialists and not one of them can say what his future entails. In following his condition doctors have determined that there is something wrong with everything in the center of Brendan's body.

We realize that we cannot change Brendan's diagnosis, however Families and Friends of Children with Genetic Disorders (F.O.G.) envision a time in the not too distant future when doctors will have a great deal of information available on each and every genetic disorder. They will be able to tell parents symptoms associated with a particular disorder as well as what not to worry about and hopefully find a way to prevent genetic disorders altogether. That is why your support today is greatly appreciated
